

IgluVan is a brand name of Just Fridge Vans. We specialise in refrigerated vehicles! We have a range of products on offer as well as the revolutionary IgluVan kit systems.

Nearly 40 years experience in the Refrigeration Industry means we have tried and tested almost every product available; we only offer the best and most suitable for your application:

- Bonded Removable Kits: IgluVan
- Chiller and Freezer Traditional seamfree laminated Linings: Frostline
- Refrigerated Box Bodies: Fridgebox
- Seamfree Hygienic linings: Supa-Seal
- Road only & Standby Refrigeration units: all makes and models available
- Static Coldstores - Fridgeboxstatic.co.uk
- Used refrigerated vehicles: coolmarket.co.uk
- Accessories; cappings, curtains, meat rails, steps etc
- **INSTALLATION CENTRES NATIONWIDE**

IgluVan Kits available for the following Vans:

Renault Vans

Kangoo

Traffic SWB

Master MWB H2 Roof

Nissan Vans

Kubistar

Primastar SWB

Interstar MWB H2 Roof

Vauxhall Vans

Vivaro SWB

Movano MWB H2 Roof

Fiat Vans

Doblo

Ducato MWB H2 Roof

Ducato LWB H2 Roof

Peugeot Vans

Boxer MWB H2 Roof

Boxer LWB H2 Roof

Citroen Vans

Relay MWB H2 Roof

Relay LWB H2 Roof

At last... a proven kit for vans

NEW

IgluVan

Bonded Removable Insulated Kits

The install is so quick, we had to freeze the frames to show you how it's done!

CHOICE...IgluVan kits are available for some of the most popular vehicles used for refrigeration deliveries. This newly developed system is for those customers looking for ATP Class C installations for chilled, frozen or deep frozen applications. Ask See the list of the vehicles available in this leaflet (List increasing all the time).

REMOVABLE...The kits are pre-formed to the exact shape of the van, (no gaps or straight panels) and offer the ability to be re-installed to one or two other vans of the same design in the future. The pre-moulded panels are made from fibreglass reinforced gel-coat; making them strong enough to withstand the toughest loads.

FAST...The pre-formed panels are installed in a matter of hours. The panels are then bonded and sealed to form a watertight compartment. Then the fridge can be installed. So, you've got a refrigerated van in less time than it takes for fibreglass to dry!!

Consider this...Moulded to the shape of the Van

The finished conversion interior that you see in some vans is sometimes deceiving; under the surface can be hidden details that can backfire on the user at a later date. Some of the removable kits on the market are nothing but straight panels touching only the ribs of the vehicle and leaving large gaps between panel and outer skins, without any insulation. This can lead to condensation and massive heat gains, causing the fridge to think its operating in higher ambients than it actually is. **IGLUVAN KITS** are moulded on both sides ensuring the panels meet the outer side skins of the van interior as well as the ribs, alleviating air gaps and possible heat traps. Offering true insulating benefit's, reducing fridge running times and holding temperatures longer and ultimately saving fuel and other running costs.

Manufactured to ATP Class "C" Specifications for deep frozen loads

The Iglu Van insulation kits have been designed for high ambients up to +40 Degrees Celsius and offering ATP Class "C" Specifications and superior thermal conductivity than our competitors. They are manufactured using high tensile glass reinforced resins and highly thermal efficient polyurethane foams. The tight fitting perfectly designed panels fit together leaving minimum gaps which are sealed with mould resistant sealants which make it ideal and safe to wash out every day if necessary. The IgluVan kits are pre-manufactured to high standards and installed in a matter of hours, without the need of skilled workforce. With correct planning vans could be turned around in a matter of days instead of weeks as normally seen.

The kits re-installation, when moved from one van to another can take less than a week from start to finish. Simple installation for all the options are also available; side doors for deep freeze, rear inset slab doors, shelving, meat rails and Refrigeration systems for any temperature or application.
